

TopSolid'Wood from Missler Software: The best CAD/CAM solution for Homag machines

The HOMAG group

World leader in the manufacturing of CNC machining centers for the wood industry, Homag is considered one of the only manufacturers offering a complete and integrated solution for the **wood industry**.

HOMAG manufacturers sawing, pressing, laminating, sizing, edge banding, drilling, assembly, packaging, handling and grinding equipment for furniture making, wood equipment and the carpentry industry.

Real machine environment for optimal machine preparation.

TopSolid'Wood from Missler Software:

TopSolid'Wood is an **integrated design, manufacturing and management software** specialised for **wood processing**. TopSolid'Wood is completed by TopSolid'WoodCam, an integrated CAM solution which automatically produces the ISO code, via a post processor, to manufacture parts on CNC machinery.

A **real data flow** exists between the design office and the manufacturing facility. This prevents numerous potential communication and technical errors and thereby generates considerable time gains.

All technical data is **coherent** and perfectly managed between **TopSolid'Wood** and **TopSolid'WoodCam**.

The Partnership:

Missler Software and HOMAG now work closely together to provide **tested** and **high-performance post-processors** to optimise the use of HOMAG machine centres with TopSolid'Cam. Mutual customers benefit from this cooperation.

The **advantages** of working with **TopSolid'Wood** are:

- Important functions to pilot HOMAG multifunction machines
- Complete associativity between CAD and CAM
- Very realistic machining preparation
- Efficient functions for simple and complex machining

TopSolid'Wood convinced HOMAG and its customers for the following reasons:

- Machining programs in "mpr" format. woodWOP remains a user-friendly interface for HOMAG machines
- Management of boring heads, aggregates, saw units, 3, 4, 5 axis heads
- Automatic recognition of wood CAD features for CNC programming
- Automatic transfer of all CAD modifications to the machining program
- Customization of machining processes by the generation of manufacturing procedures
- Precise and automatic management of cutting conditions
- Machining simulation of the complete machine environment

TopSolid'Wood for HOMAG machines:

The best solution to minimise your integration times and maximise your quality!
