3DPARTFINDER<sup>™</sup> ENTERPRISE  
FOR TOPSOLID<sup>®</sup>

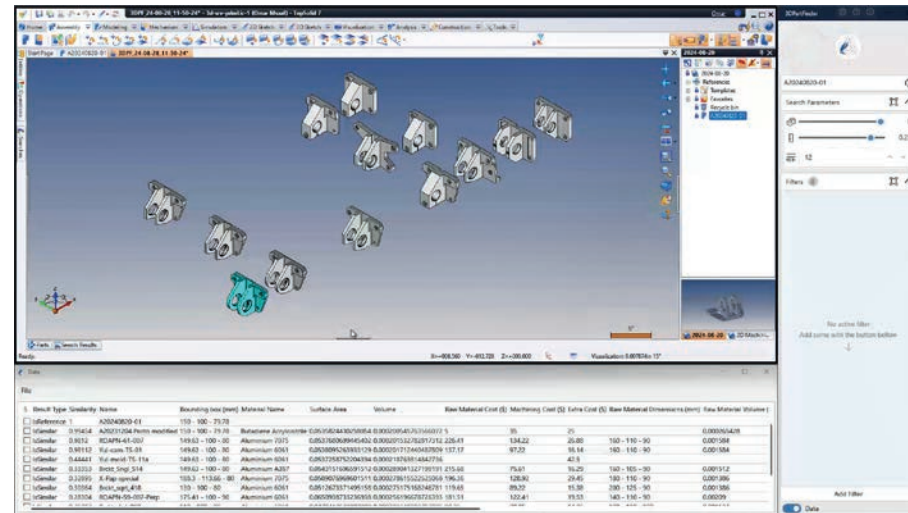

3DPartFinder

## UNLOCK THE POWER OF YOUR DATA AND EXPERTISE TO GAIN A COMPETITIVE EDGE!

- Simplify your quoting process by accessing similar parts already manufactured.
- What tolerances are required for this part?
- Do you have a reusable CNC program?

With 3DPartFinder Enterprise, harness the full potential of advanced geometric search integrated with TopSolid®Pdm™ to gain precise answers and boost your efficiency.

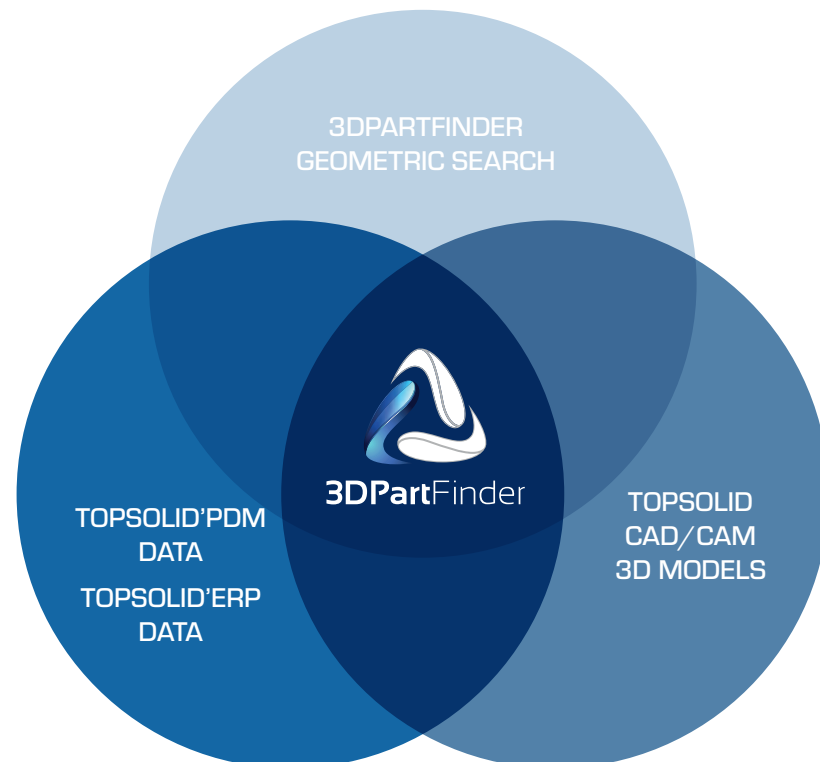

### THE INDUSTRY STANDARD IN GEOMETRIC SEARCH

3DPartFinder revolutionizes search in the industrial sector by surpassing traditional keyword-based methods.

Starting from an existing model or a simple 3D sketch, it quickly identifies duplicate or similar parts already produced.

This patented technology, trusted by leading multinational corporations and SMEs for over a decade, helps you eliminate redundant part creation, encourages the reuse of proven designs and enhances the value of your company's expertise.

3DPartFinder

## OPTIMIZE DATA REUSE WITH 3DPARTFINDER

### CAPITALIZE ON INSIGHTS FROM SIMILAR PARTS

When two parts with the same material have similar geometry, it is reasonable to assume that they share the same functions and manufacturing processes. Why not reap the benefits?

3DPartFinder Enterprise for TopSolid fuses your 3D models and related data—regardless of their source. Through advanced geometric search, quickly identify similar parts and extract key information to optimize your workflows.

### GENERATE FASTER, MORE ACCURATE QUOTES

Easily access quoting data from similar parts produced in the past. Leverage historical machining knowledge to create new quotes effortlessly.

### STREAMLINE MANUFACTURING PREPARATION

Quickly locate CNC programs, tools, processes, and resources used for similar parts. Optimize preparation for each new part by building on your company's expertise. With seamless integration between 3DPartFinder, TopSolid®Design, and TopSolid®Pdm, you can deploy this solution in less than three days and easily identify reusable data.
